

# Specialty Masonry & Mortar Cements

Type N | Type S

## Built for Every Masonry Application

From residential communities to critical infrastructure, Roanoke's masonry cements are engineered to meet the full spectrum of construction demands—balancing workability, strength, and long-term durability.

### Type N

- General-purpose mortar
- Compressive Strength: ~750 psi
- High workability
- Above-grade applications

#### Use Cases:

- Brick veneers and facades
- Interior & exterior walls
- Chimneys & fireplaces

#### Ideal for:

- Single-family homes and multi-family housing
- Schools & office buildings
- Retail centers & renovations

### Type S

- Structural mortar
- Compressive Strength: ~1,800 psi
- High bond strength
- Above & below grade

- Load-bearing walls
- Foundations & basements
- Retaining walls

- Infrastructure (retaining walls, utilities)
- Residential basements & structural masonry
- Hospitals, schools, & warehouses

## Did you know?

Roanoke Cement is known for superior color consistency, durability, and long-term performance. By incorporating our pigments at the batch, and through the use of a colorimeter to verify accuracy from batch to batch, we ensure uniform color throughout the material. In addition, because color is distributed through the full depth, it remains consistent even with wear or surface damage, delivering lasting performance with minimal maintenance
